

CARBON NEUTRAL

Ascenty
A Digital Realty and Brookfield Infrastructure JV

Carbon dioxide (CO₂) emissions occur in various situations, such as when energy and fuel is used and when waste is incinerated in landfills.

The intensification of global warming is directly related to these emissions.

The adoption of measures to reduce global warming is a commitment that must be adopted by all of society, especially companies.

Ascenty's actions encompass all scopes, offsetting the carbon emitted internally and by everyone who works with the company.
